

## Training

Dawsons Training Division was initially strategically set up to ensure that Dawsons Group of Companies' personnel have the most up to date qualifications as required by our clients both on remote sites and within our workshops. In October 2011 Dawsons Training became a Registered Training Organisation (RTO) delivering quality, nationally accredited training.

Our training facility at Cairns is made up of three purpose built training rooms with a capacity of 25 participants in each. As an active work site, workshop facilities, yard areas and mobile plant are available for high risk training courses.

Training rooms are available for hire for external use, either ½ day or full day.

Each training room is fully equipped with practical equipment to provide hands on and real life training experience.

Our site is designed to allow for practical simulations that enable trainers to demonstrate and participants to be involved in, realistic scenarios and training activities, using quality controlled tag and tested harnesses, winches and safety equipment.

Our trainers draw on a diversity of experience in the mining, transport, milling and various government industries throughout Australia. They have the advantage of retaining close working relationships within these industries to ensure the most current, industry specific knowledge and experience is passed on.

Dawsons Training culture is one of pride, success and hard work. Our staff are passionate about training.
